EDUCATION

New York University

Master of Science – MS, Data Science

Expected Graduation May 2028

New York, NY

New York University

Bachelor's Degree, Data Science, Recorded Music, GPA: 3.82/4.00

May 2026

New York, NY

- Relevant Courses: Data Structures, Linear Algebra, Probability & Statistics, Principles of Data Science II

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript

Technologies: NumPy, Pandas, Scikit-Learn, PySpark, SciPy, PyTorch, FastAPI, Flask, LangChain, LangGraph

Tools: Git, Snowflake, Databricks, PostgreSQL, AWS, Docker, MongoDB, Redis, Pinecone

EXPERIENCE

Data Scientist Intern

Jun. 2026 – Aug. 2026

The Walt Disney Company

New York, NY

- Evaluated 52 product experiments using predicted long-term subscriber value (LTV) as the outcome with Snowflake SQL
- Applied ANCOVA with pre-experiment predicted LTV as a covariate, reducing treatment-effect estimate variance by 64% to improve statistical power
- Reduced production LTV model feature set by 89.9% via RFECV while maintaining RMSE within 1% of baseline, cutting SHAP compute from 800 to 25 node-hours
- Built a PySpark inference pipeline for LTV and paid-month scoring across two 84M-subscriber population tables

Undergraduate Researcher, Applied ML

Sep. 2025 – May 2026

NYU Center for Data Science

New York, NY

- Secured DURF research grant to explore ML application in Hot 100 song lifespan prediction with social media features
- Engineered Python scripts to collect 5+ years of chart data, social data, song duration and genre tags for 2,000+ songs
- Built 1,000+ pre-release time-series features; trained Random Forest classifier with 5-fold CV to achieve 0.737 AUC

Data Scientist Intern

May 2025 – Aug. 2025

Flite

New York, NY

- Led development of Flite AI, an agentic chatbot that answers platform questions and supports Flite-specific tool calls
- Increased response relevancy to 94% via LangGraph multi-agent workflow and Redis cache memory implementation
- Built 2 RAG pipelines to retrieve query-relevant data from 10,000+ conversation embeds with MongoDB Atlas
- Fine-tuned Mistral 7B Instruct v0.3 on AWS EC2 GPUs using LoRA for parameter-efficient training

A&R Research Intern

Feb. 2024 – Aug. 2024

Warner Music Group

New York, NY

- Delivered data reports on independent artists using streaming consumption and social engagement metrics
- Signed two artists to exclusive distribution deals; flagged and assisted in a \$200K artist signing
- Proposed artist signings who went on to stream 2B+ times on music DSPs

PROJECTS

NYU DSC x Corner Datathon 2025 Winner (1st Place) | Python, FastAPI, Transformers | [\[Code\]](#)

- Built a RAG recommendation system to match vague user searches with NYC venues using tags, reviews, and image data
- Developed a hybrid search function using SentenceTransformers, SPLADE, and CLIP models for multimodal embedding

Capstone Project: Rate My Professor Evaluations | Python, Pandas, Scikit-Learn | [\[Code\]](#)

- Analyzed 80,000+ professor ratings, uncovering biases in gender and disciplines (Cohen's d = 0.059 and -0.282)
- Identified best predictors of teaching ratings and handled multicollinearity via Ridge regression ($R^2 = 0.81$, RMSE = 0.37)
- Predicted "peppered" status with logistic regression; raised AUC from 0.69 to 0.80 via downsampling for class imbalance

Company Sector Classification (ExioNAICS Dataset) | Python, PyTorch, Scikit-Learn | [\[Code\]](#)

- Developed and trained ML models to classify companies into NAICS-2 sector categories from company description data
- Fine-tuned BGE-large with an MLP head on an A100 GPU; optimized number of frozen layers and hidden layers via Optuna
- Achieved 88.1% Top-5 accuracy on 20-class test set and 63.6% Top-1 accuracy on 7-class OOD set

AWARDS & CERTIFICATIONS

NYU Dean's List (2023 – 2026): Recognized each semester for maintaining a GPA of 3.7 or better.

Dean's Undergraduate Research Fund Grant (Apr. 2025)

Introduction to LangGraph (Issued Jul. 2025)
